

eLastyc Trio App - free fun with something new. It “blasts” photos to form comical “trios” and funny faces on iPhone, iPad and iPod Touch

Mountain View, CA (March 25, 2011) - Volyy LLC releases the eLastyc Trio application that brings something new to the entertaining fun of playing with faces in photos. It splits a photo into pieces with a “blast” producing a collage of three comical reflections of the face. The effect is amusing, especially because the morphing appears in real time and is smoothly adjustable in a number of ways. The “trios” or just single funny faces can be stored and shared either full-size or as app-style icons.

The eLastyc Trio is the first free application built on the eLastyc image-morphing engine introduced with the Volyy's flagship eLastyc Pix application. The eLastyc Trio application provides the same set of photo loading, saving and sharing options as found in the eLastyc Pix and has the morphing engine configured for a specific subset of morphing effects.

Volyy LLC also releases the next version of eLastyc Pix, an innovative app for transforming and morphing photos in easy and entertaining ways. It introduces novel features and techniques optimized for editing photos with touches. This allows amazing visual effects animated in real time and easily controllable in a variety of ways, which gives an exciting feeling of magical power to transform the appearance of people and objects in images. Version 1.1 of eLastyc Pix adds features of making and sharing photos as app-style icons.

Device requirements: iPhone, iPad and iPod Touch, iOS 3.0 or later

Pricing and availability: eLastyc Trio is FREE, eLastyc Pix is \$2.99 (USD). Both applications are available worldwide exclusively through the App Store in the Entertainment category.

Volyy LLC, a California company, was founded in October 2010 by a team of scientists from Stanford University and experts from the software development industry. The team's combined careers total more than a half-century of design experience and expertise. The company's vision is to create exciting consumer products with roots in the sciences that produce nothing short of masterpiece works of art. The initial products are targeted to the mobile device applications market and utilize a highly efficient multi-platform proprietary eLastyc™ graphics engine. By optimizing image processing efficiency stunning artistic effects are made possible on mobile devices.
